

Passenger Information Displays (PIDs)

Passenger Information Displays (PIDs)

Our vehicle-optimised displays are available in multiple sizes and form factors to suit virtually any vehicle in your fleet. Designed with all-metal enclosures, tempered glass fronts, and fanless computers, they are built for reliability, and powerful enough to deliver both real-time traffic information and high-quality infotainment.

Superwide formats are ideal for displaying traffic data alongside maps, videos, or other content, all at once. Mix and match sizes, orientations, and screen types to fit your specific needs.

And of course, these displays are equally well-suited for off-board installations.
